Ascaris after in alcohol carmine

Kept in abs of alcohol -

- (1) in Benzole - heat to 60-60 R  
never over - add paraffine gradually  
until all infiltrated with - more paraff  
(2) embed in paraffine - add a little  
wax to the paraffine -  
(3) cut sections - which are  
~~soak~~ soak the corks first in paraffine  
then build up the mass about the pin  
(4) smear a glass - traps with shellac  
(5) keep with the st. canophth  
(6) after seal

- I Ch. <sup>56.</sup> *enphysema*. - & Ch bronchitis  
& heart normal, but has had a. bright.  
Remarkable enlargement of abd veins  
& complaints of st. of breath. Neck dist  
veins. ext. jug. Thorax. gut devol. Star  
moves in masses. Heart - not t. see. Peren  
Grenzsch. cough noisy stark. Cap. mucus.  
Pulse full - art. large. Ch arteritis is also here  
& pars. hyper of rt + left. vent. Has sweating  
on whole body. In abd. sehr hochgr dist  
of veins in abd. & lower thor. Extreme vascosity  
where runs the blood? hard to say such  
ext com. that pars. opens no idea. Possibly  
a very unfatig. circumstance.  
See part in been saph. There is an  
period of cold sweat which

- II Woman, 43. as anamnese. h 19 K.  
gr. thermometer. Sore throat very slight  
& short. breath. no swelling effect. H. apper.  
24 years. 23 illc 22. and d. slightly  
allact. The left half of body paralysis  
soon improved in leg. Left arm remains  
numb. can get about but no. h mid  
Feb. shortness of breath & cingh. severely  
pect. Got dyspepsia & 27 th another  
attack of left side spasms & loss of control

s has remain so & also fever.

Pat. bewusstlos, no œdema. No cyanosis a little. Looks a little icteric - probably the pseudochr. Most cont.

Face & head towards the rt side. Eyes against the left - conjug. deviat - pupils equal. Not very mobile. Left face a little swollen. To see if there is paralysis bunch the face - . No movement. Possibly both sides are a little par. & schlaff.

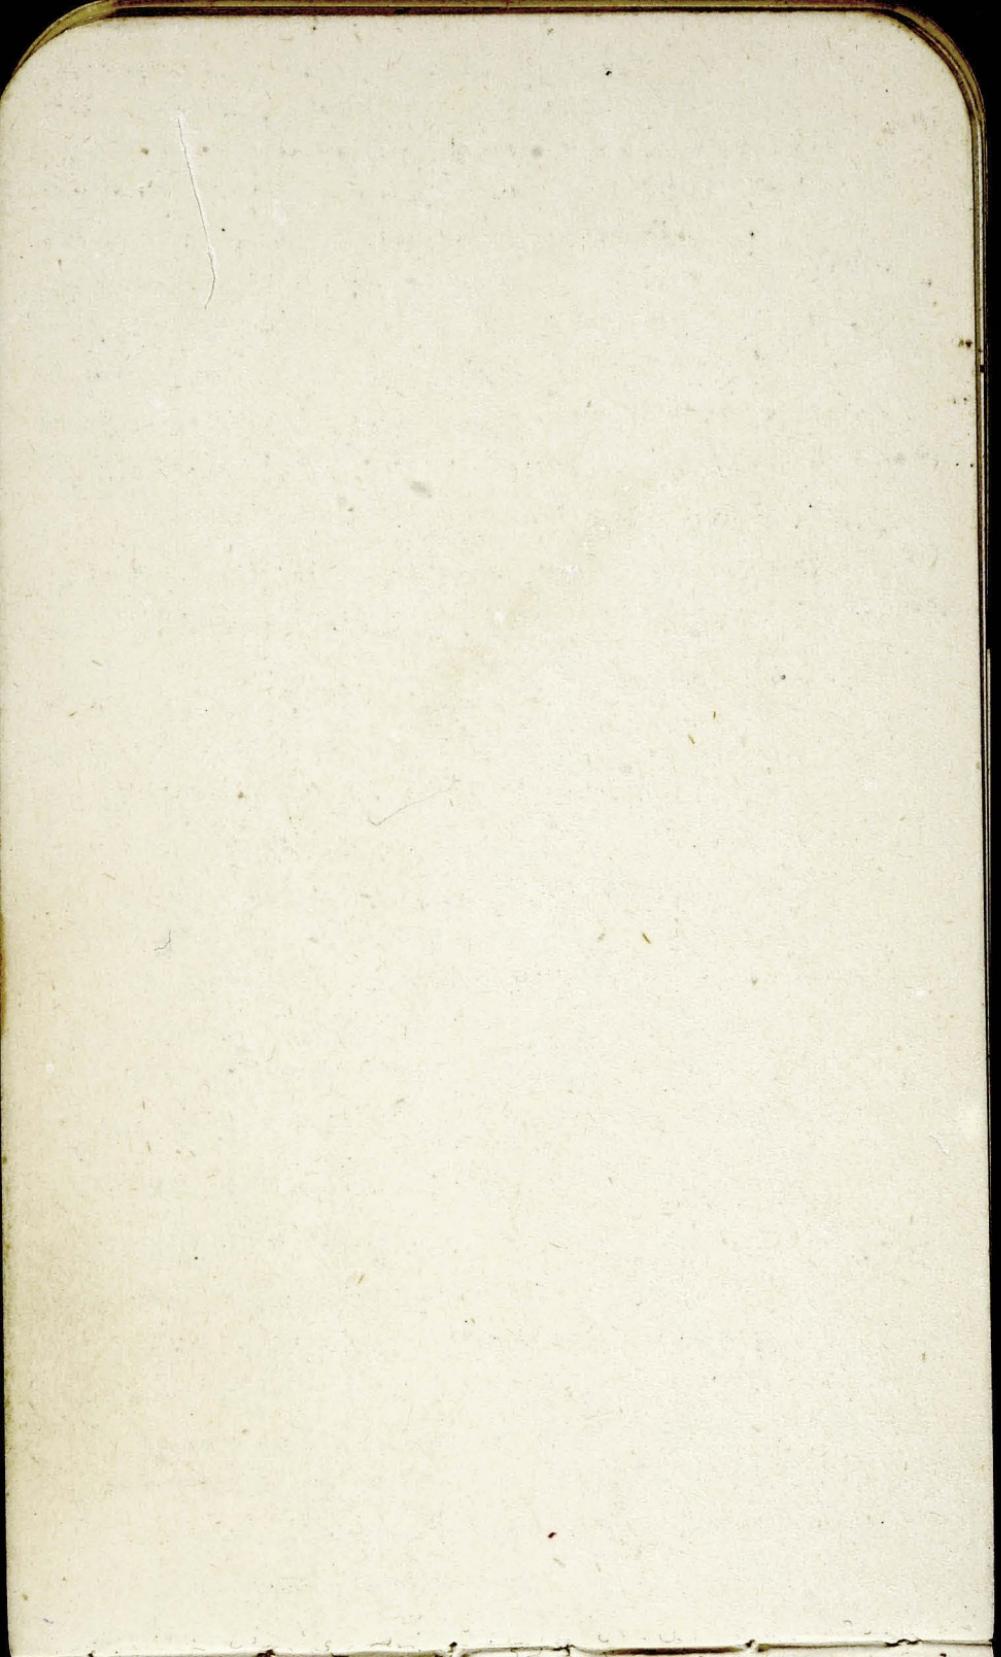

No mackenstaines. Smth. the left.

Throats. Left leg at the moment.  
Heart - apex - wider rash ticks, but regular. & amplitude strong. Sudden early palp. irregular. Left arm. Contracted. The fingers. Seven retained.

Left leg also contracted. cannot bend it readily  
on the left side Lähmung & stark contractur. Occas spasms. Only score today the right side seems affected. In rt leg. is also but a little can be moved. Skin reflexes. Drowsy.  
An old example with a recent attack. In that of the 27th there were spasms. Fever to 40° & more. Spasms. Sticks heating come on.

What in the brain? Torment attacks. whether hem or imbal not the said

On the left side. contract movement. very early. A paralysed side a yet movement. Probably you fall that arm crusty on same side a reactive speech in the region of the old ear. In the surround. Only early or midweek. a few car pny of movement's local. cut of no rest. a reactive speech so late or rare may be another cerebral now on the first. loss of which suppose

the motor centres.

It may be in the left ventricle. & then we often see an analog effect of cortex convol. & brain.

The coma - not if one sub. mucus large - a great blot. ergus or in the lat. vent. a comp. of the brain -

Can it be from the Pons? a local lesion could not have caused it in the 27th.  
The coma - is against it.

Bright's. Dr. Bright - Hemorrhage

not so <sup>as</sup> hem. looks like some of  
hem. neph. & but. microscopic - not.  
This is a ch. case.

Cystitis

Pyelitis - one sure graph not <sup>dark</sup> only  
pain in sacrum region as an indirect  
possible into the cyst, the colic, & the  
Kidney disease may may drag also pyel.  
microscop. cells of pelvis.

Cystitis not always account of these  
cells. Statement that one can  
diag. cyst- $\rightarrow$  pyelitis if these cells is  
false. Bright's disease Uterus and  
pyelitis also acid, cystitis alkaline  
of a cysto-pyelitis isn't - does it except the  
symptoms? No. Not the adema in the  
cylinders. Must a Kidney disease -  
what? In urine - with cysto pyel is  
very prominent.

Such large cylinders, one in the approach  
of the pyramids. often for the  
rest of sulph for the pelvis - at the  
ends of the tubes - diag left & right  
as to the kidney - disease  
Swathes tube.

This disease - not very bright. In older  
of his picture diffuse adema - it may be cat  
fever - 2nd day.

(2) Man - acute Gastro - duodenal colic & fever. 16th day. on 8th day patient came back in head. - in connect with an acute Typhoid almost unheard of: - no soreness - no spleen tender. Belly large yet - not tender. but a belly of greater resistance - & the patient said it does, compression of in chest - a pleuro-pneumonia - but we in all together - diagnosis of Typhoid improbable - the colic - ahead. - &c. may be in prob. a tub. of peritoneum & pleura - some possibly tub. which is intestine. Pain well tell.

(3) Man 40+ - double - lung Pneumo- haemorrhage in legs - proptosis - ch - tuber. disease - just in the legs & in the skin

(4) Skin disease - old man - 4 months itches much.

(1) Man, round-build, Face pale. T. 102° 39'. P. small regular. Complaints of some day of disease. Anti-syphilitic fever every 2d. not anything but the t. comes off 4th to 13th, 25th to 35th.

7 Recurrent: purplish - Sporilla. had it once (a) T. of R. - goes up as in other adult off & on. except by fits. but keeps up till for a week & then 8.78° under copious sweat - not

(b) Intermittent. - a regular break.

(c) Irregular, F. may be regular, or intermittent - Many spots in the body rule disease may be suppuration or tumor.

(d) Tuberculosis. which T. has been observed. It is possible here that it is a tub. trouble - class you'd expect to be in - 1 malarii (2) tubercularis

(2) Man. 21 years old, pain in abdomen Tumor in mid. of abd. a little above middle. He felt it & could push it up much emac. 76 lbs in 84. Blots hollow bloody. Some 9 weeks to house a sum. well in hospital & vomiting off & on

better after it. Face dusky yellow  
Tongue clean - "end of tongue more  
of stomach". Belly full - caused the  
stomach - decreased. Left side more swollen.  
Palpation, a wavy movement when light  
percuss., Res. mass in left hypo. + great at nose  
& towards right hypoch., likewise tympanitic  
when turned in rt side. dullness in + the  
reverse. - appetite good, B. good.

Cat. vent inspiration. When a bat, but  
a bat does feel warmly, the skin - certainly  
normal. Dark. slugs. Iron - Klein  
man who cut tube while had a tumor +  
when they asked him if he did not think  
the tumor he replied that he thought it  
probably normal as he was 21, & weeks had  
a bleeding from the other tube.

Pec. config. of abd.. Dil. magnum drawn  
down + expanded. 2 method of obliquus  
ab develop. C. or - good. often much constipated  
& faint for days. (2) sound. + the knoff.  
feels. in the stomach blow out.

For vomiting the recumbent position is the best  
Med. in C. vent. very good. ~~poor~~  
little at all time. of dilat. or not. so  
little as possible of fluid + take

and curving. a good stim.

Tongue clean, but may be

(1) organ of a patient with ch. lung bull.

Album which here with a low  
T. has a greater significance. An  
unpleasant pneumonia. Prog bad  
The sudden com. is not little in pneum  
of old people as most often insidious  
Treatment. Heart - weakness & age -  
stimulants - Physost. & pharamacy -  
aloch., Calophor & cether. Shall  
2. be given in Digitalis? Not now but  
later the digitalis inflas

Rucker's Case from Chester

(2) Man 44. Had been a soldier.

1 1/2 years. Strength affected - Tingling sensation for 1/2 y. & then a year. pains in legs  
Tides 2 years duration

Eyes. not pastic. pupils a little wide  
When looks right the bulb moves a little back  
Any Robert symptom not present.

Girdle pain very constant. but in  
evening worse. - no distress in lungs or  
abdomen - a gang. behind. at 6 m Schmerz  
a little weakness of right arm. - Sensitif  
undentified. - Tongue. -paresthesia &  
subject. cold sensat in rt. hand.

To test at site of upper esp. close the  
eyes & let hand try to oppose the index finger  
while stretching out the arms to full length  
Lower esp. motil. Power good  
Sensat. much reduced on foot soles  
Pallestheses - skin not changed. The tendons  
esp are tenaciously. Gain g gang charac-  
terist. - In claudic. but absent - eyes at  
bottom - y looks up swells & falls at  
one of eyelid closed. 100 looks like small as  
locusts (2) When a stick to support him.  
Stamping - sits. heels down flat. & the  
Knee joint not extended much.

(1) Remarks on Grey degeneration  
Sent mind specimens with a decerebrate  
horse - other cases

(A) 58. man - first - difficult - 8 years ago  
Young as if - now since 82. Amputated  
chiefly of mobility & use his feet well,  
no retained trouble. Formerly double vision. One  
fact of st. interest - unequal in eyes of which  
both eng. - myosis. lost of reflexes except  
bladder. formed in winter now gone  
had to let water when he writes

Girdle syndrome - - no lightening pains  
Pains of arm. received. numbers in the  
fingers. vasomotor in trophic disease  
cold - - nocturnal.  
Lower ext. R. weaker than weaker.  
Sense of wood in feet. + etc. dull

(B) pain sense is retarded  
common sense - not. Misses sense also  
normal. when one limb is placed in deep  
soil, patient can readily put the  
other in the same. Make fail  
put head on oppo's shoulder  
Part - very char. wide face.  
Laces horribly

Spirule of arctic musk as none  
These come together. 5 or 6 cases in 7 yrs  
to not know. must if not be F. & W.  
arct. musk oleander in 3rd case. Syphilis

dt. or of a common cause till the two - as Syphilis  
The auto dis a line, very faint. also auto  
area. said that the English tho the Indo-  
asst descended on the Hy.

III. Man. 40. not Syph. Same 1 year

numbers infect a hand. no pains.  
Powerful man. Sensor normal. Eyes  
no nystagmus. Pupils equal. Optic absolutely  
converging. Agraphia beginning  
disturb of speech. Headache, staccato, probably  
central. Tongue & thin. Hope, a coordination  
disturbance of the tongue muscles. like in  
the n. or centre or muscle. Thor organs normal  
no saddle feel. Bladder normal. Arms power  
good - no secondary disturb. Legs. Power good  
sensat - not disturbed. Reflexes absent.  
Pain sensat. retarded. Coordination and  
dist. Again heel in knee. excellent test  
when told to put the left leg when the right when  
flexed & heel on rest. could not do it.  
How is the sensit. for sensit. dist. pain  
lightning - often the first. a term used by  
of the sensat. root & muscle. (2) pain. painful  
sense in intercostal nerves. a 3rd sensat.  
of pain in arms & tingling & then cold  
& loss of circulation. No knowledge of the  
position of their muscle.

III. No motor disturbance. dependent on sensat.  
dist. & c on the coordination.

Trophic disturb. not common & then late  
nystagmus. 6 cases only 1 marked marked  
a n evulsion of OC. motor.

In Morbus such nystagmus very common.

The speech disorder here dependent on  
bulbus trouble.

Possibly the 3rd case may be multiple  
sclerosis. Ch. passing of Egypt.  
Symptoms quite like Tabes & in 5 cases  
the same pathological changes. In five  
cases a disease which in certain cases  
very similar. & Westphal had very  
thick air ch alcohol. & distinct in the  
nerves. Within very little Tabes  
a variety of Tabes in wh. the Sp and  
normal & the peripheral nerves not  
affected. Quite little Tab. inf. action  
& distinct of consciousness.

Tabes perniciosa - a neuritis

18. Tabes. young man.

(1) absence of reflexes & spasms in legs.  
Urge. (2) bladder disturbance. (3) very  
slight coostrum. a little strong  
but not much. Dies probably. An  
incurable case.

- ch. alcoholism  $\approx$  epilepsy.

Mean though in  
poor street. smile blue. gasping looks  
miserable. Epileptic attacks & some  
relaxation. cuties lobular. Kennet died  
but died, say the few. no speech changes

an. artic

26th.

T. Man 52 - Paroxysms old.  
3/4 of year cold in evening. Evening  
hotter. Came to W. 14 days - found in course  
of chest or gang settler. Leiden  
Kerselkert & shortness of breath. Throat heat  
almost tongue voice. Palpat of the larvae  
often irregular. On one side no vibration,  
in the other quite distinct - may be  
either (1) dry, hoarsy - (2) barking. There  
also a left sided recurrent paroxysms  
also the left vocal cord is very atrophied & the  
right moves over the middle line  
Cause. At W. Marin where no impulse from the  
auditory. (1) in the vagus nerve. (2) in the course  
of the phrenic.

Inspection of pulsation neck. a little strong.  
Subclav. - Not quite regular of c. & s. pulsations  
quite equal. On Throat. Subcutaneous  
strong. & on left side most strong. Palpa. normal.  
Percuss. H. imp. dist. tender.  
4 dullness a little increased. In such cases  
heavy persons. & then a dullness in  
also behind. Auscult. both lungs clear  
a distinct crackle. If systol & a more plain  
intervall. & over the  
pulsato.

Pulse  
heaving  
nummous.  
dife between the orthals.  
An examp of tremor. a tremor.  
are working office action may be present.

Phrenic n. is very rarely affected - Vagus  
no positive - a recurv. affection  
can be produced in another way, a strong  
contraction may induce - Trachea -  
called attention later - Recurven larynx  
in acute arsenism.

II. A recurrents Paralysis. R. man.

Carcinoma asoph. upper part.

The C. as. super. was at the right side  
extended & involved the n. or lymph  
glands are involved. No dysphagia  
or paral of the Recurrents. In dentate  
ended. very curvus.

III. Dad 19. 16th June admitted

12 th of some headache &c. Fever 41.2 - 41.3  
looks ill - less apathetic. No a like sick  
answers question badly - dull. or a Typhus.  
Glandular & skin typhous. Rash on  
abdomen. albumuria. Stool passed invol.  
speck. a few

Cerebral appearance do not slant a  
proportion the Temp. Calad. pneumonia.  
W/ in severe with high temp. & small new  
systems. Battles 36 R t 20. & cold  
doubts.

I Patient who 31. May + 9 May was  
put with tubercular pleuritic exudate  
sectioned today, was incised +  
washed out. Tuberculosis process  
possibly of an earlier junction + in man  
had been made - 2 or 3 years more life.  
30th removed

II Man with ext. skin rash. (Pronase)  
1 - a skin care - 6 years, clothes on  
shoulders - not usual. Very extensive  
symmetr. - spots of varied size - on head  
especially. Face also affected. Hands, not  
much affected. No internal affl. no fever.  
Chrysoph. t 30 . . & but am paar warm bad.

III Woman. Mittelgross entschaden für  
grave hair. Feberlos, good colour but  
not plethoric. Lungs - normal. Heart not  
to be percussed. Siponvalvulae, great; appetite  
good. No arthritismus. Urine normal.  
On joints. Arms no pain or affe. in feet.  
which have often been swollen - now not. H. ball  
of foot very large - toes bisected onto - very few  
clawed. auballsprünkte. Diphonit, &  
the of big toe affec. The fatty. trouble certain  
is it in cerebrum? no. In neck & mouth - no in  
extorsal lipon. even in the tongue. The ears  
are small in sett aubau in head. In Throat  
outward, small in mediastinum. Pleura  
extorsis. In Heart. here portly - outside  
in par. + vein. The small pulse - the  
feeble pulsation. ohne. principal here is  
a fat heart. con adipsisum of palpable  
in mesentery often the mesalene fat.

spreads over the edges of the larynx  
What is the joint trouble? Is it Gicht?  
Hereditary - not - nor in Lebensweise of  
the patient. No lead trouble. But the  
Wentz - seen in the joint smashes the  
diagnosis very probable. Good description  
of a gouty attack - . urine more or  
less acid & during the attack & after it  
more. & Arthritis urica  
Symptoms are often - not usually reg as  
Goutheit, but when too early 2 yr. or so  
old man. Passage of blood not not  
normal - less - in very fat people. - a poor  
blood. When a fat person, every 5th sleep  
threw up in the bed -

Cures - 3 chief ones. English - Baulmej.  
Prof Vogt - Halle - Eat nothing but flesh  
~~that~~ what they would, but not beer.  
Most of them - nervous & the flesh diet  
not dyspeptic - then given up.

Dalem. Man eat much flesh - carbohydrates  
limited. Can eat fat sandwiches as  
much as they like. Based on the common  
sense. 3 Schwellinger. treated by my  
Disseminate. ~~Artel~~ of Münster is the  
1st. That the men from West fat clayman  
2. no meat fat  
3. blood for some other  
4. heart rises more kraft  
= gang lebenweise - 110 gr.

Nitroge potash - Eggs pref. 2 little fat  
not about forbidden - (3) Morder tinctura  
of Calvadosy - Glen - rest in large  
quantity - what most - is very little  
fluid - one of the most difficult things  
2 small cups of coffee - 2 secm.

again. people move about to get  
a better circulation in veins & also to  
sweat - Give an amount of 6 lbs (one of)  
says even fat people got up mountain  
Battes - Turkish - or even Polocashin  
here in this case - where sweat is  
present there cases very difficult

Took the class

29th

(1) Case of small pox - oldest of infes, the  
most severe, the most extensive. Egg 95%  
of all men got it before vaccination. Prognosis  
not about in favor.

(2) Man 48 - for many years a loss  
of blood per rectum in March. the pain  
ceased. & diarrhea - six weeks - pains  
in legs. short breath. Lorts pale & thin.  
Pusment on skin of abdomen. Belly  
swollen, tense <sup>a hard spot to</sup> - not so hard  
as aphelie - no vomiting. Bowels - diarrhea  
up to yesterday.  
But may have fallen - In the sedu-

cells man the rectum cut well & left wide  
a large raw, circular, & in the middle  
a narrow canal. - ulceration is -  
a Carcunoma - about reaches above the  
anus . The disease - above the  
narrow pipe the lumen is wide  
& a catharrh is visible & the colon catharrh  
is very common. In the may or the cases  
diseased such ones found, is scarcely  
anything else but cancer. The  
Belly dereliction is therefore  
& perhaps - operculitis - which may be  
associated with the carcinoma with  
a tube the medullary may be benefits  
for the pain muscle subcut. & for the  
blunt ice. May be panthers the art

III 3rd time of shining - 2.1 sec.  
8th June - & see again Status garrison  
condition of pentoxine. the dry pleurit  
- a tuberculous of the serous membrane  
- possibly from a chronic ulcer. At equal  
spacing of bubbles & such as in several fits  
of fluid as cholera. & also in the  
hives particularly of pentoxine. Pulse  
numerous & accelerates. Belly full & loose  
The idea of tub. peritonitis not also either, but  
highly probably. - the affect of the pleura may  
not be. vomiting. No trouble in stools  
30. Epileptic not dead. Berlin.

Capillary Bronchitis.

IV. in child 4 years. always healthy  
for 4 weeks singl. & got worse. for days  
ul on tongue mouth. severe looking  
Bronkheat. Rester. head back. A peculiar  
color of skin - cyanosis & a certain specific  
greenish ausdruck. Grey blue color with  
adenia. & the axe of face. & con-  
gestion. - Racial treatment frequent  
ehr. Auger strength. with each inspiration the intercostal  
drawn in & the contr. & the draplin drawn in  
the carina - a disease which seriously  
impair the - voice is not affected. T. not much  
elevated. Pulse normal or slower. Res. also. T less  
than affected. not often so. Percuss. not  
dull at back. over whole thorax everywhere.  
Tetragranch - Bronchitis universale. In the  
lung. croup. ulcer. & in faces they also  
main kann an rot. deuten - 1st rachitis  
(1) present. whooping cough has been b/t what  
we have now. one of the most imp. of R.R.  
Calash. Bronch & calash pneumonia. which  
explains the severe dyspnoe. atelectasis.  
Often not like diag by percussion.

Therape good air. Meas & whooping cough & cat.  
(1) Good air. mult. (2) for Resp. <sup>lungs</sup> cold water.

eg. 6 hrs. - cold douche - get out much mucus  
better but accomplish. I spec.

July 2nd Specimens shown - hangen, it large  
an ac empty. (2) in one in a red mass of blue red spot  
atelectasis we are other lung. little blue red & white  
& pinkish mucous matter a general bronchitis  
It success by of rest very great. Tably over

30th

I Case of Scrofula. Skin on 13th  
better. Blister bleiste along a no springy  
state of growth. cure rest - nutr.  
& bleed.

II child with Syph. cut. hered.  
~~of last day with capillary~~  
large spleen & liver. 2 ml cast  
o. - colonel. The skin rash  
better. but the general condition not  
good.

III Specimen for cancer of rectum of  
last day. - Rennititis had killed him

IV. Case shown of 30th April. with peripher  
double pleuritis + pericard. Gradually  
relieved. after 17th June. temp irregular  
40-40.5. Very pale.曾 found  
a chirod. desiccated - usually  
with liver. Is the whole process syph.  
It can be demonstrated & it does not affect over  
whole serous membrane. May consider  
this a case of tub. of serous mem. w/  
tubercle. we see not infreq. for 2-3  
years chronic usually corona tub. which  
are cavers.

Zoöman *andersonianum* Drago Prof Hagen.

(V.) Pleurisy. Left sided haemoptysis  
then the right side. on 16th June.  
Haemoptysis. Diagnosis of a tub. pleurisy.  
A serous effusion which descends to others &  
not dependent upon North Branch &c. No Bacilli  
found. When a pus exudate in serous  
che or pericard. the cause & prognosis in lung  
of that side is doubtful

There 3 cases. but serous can't. Peri-

2 - Pleur. 3 - Bone. 1

Possibly the small lymphatic glands if  
above the pericardium may be affected & then  
the pericard.

(V1) Croup. The case on 17th - better

VII 15-yr Ad. <sup>male</sup> Camier or Griswold. piano  
teacher - In health until about a month ago  
fever, cold March 22 May 1st  
cough will cover almost his chest, & then has  
lasted on during the night sleep. Little  
but little food. Greatly wasted. Exar done  
finding anything. No fever.

Gang. sign. very obs. (1) Sound <sup>dry</sup> or  
wheezing. (2) a deep lined expen-  
sion of the throat affe. Before the expen-  
sion there are 3 or four justly attempts at  
exp. also noisy. All respiration  
regular. In throat. In exp. the gauze  
a visible contraction.

Can say ab - & Prof Dr just has  
had me mouth a wretched breath  
smell smelly - & then about she health  
Drooled greatly - & took water - Great  
contraction - took deep respiration - Lay down  
& vented gasping - Spike her name  
Had over worked at school very much.

The child had become quite dyspneic  
no dist. of heart & lungs - the discovered  
was quite as if suffocated.

What form of disease of health can it be brought?  
None which we see - part or phlegm

An ulterior cause in larynx & phary -  
are they diseases - infl. or a neoplasm. etc  
are they of a sc. nature - as after a wound in  
the eye trouble which she had. Had worked  
over the strength, sudden onset. The  
inner dust of a new dress - is it Hydatid  
not gang infection - Dis of d. often in hydatid  
epilepsy - so severe that think suffoc.

Right larynx of glottis - & then (3) a no  
of causes due to of recent work, coughing  
char., uninterrupted may be - like a  
dog or like a dog or a wolf. Phrenic's cause  
(4) aphonia.

Not an unprop - a peculiar vice

of the absent disease - (3) by taking regular  
exp of breath - at first hard - but porous -  
May throat - Give or can cough for 10 minutes  
water Peter is thin or moist. Throat of hospital cured  
in one day.

To Dr James Tyron 15<sup>th</sup> Apr 1884

17/6/84

I have been in Germany about 11<sup>th</sup> & your letter <sup>on 29th</sup> <sup>when</sup> reached me yesterday & I cabled you today "yes" meaning that I would accept the position of appointed to it. I have been away in Germany since April 1<sup>st</sup>. I will regret exceedingly leaving Munich but the temptation is naturally very great. Of course I feel exceedingly gratified that my name should even be mentioned in connection with the position and I can assure you that if appointed I shall not spare work in order to fulfil the duty of the post satisfactorily. I suppose I need not send herbariums or anything like that, a full my collect report 1872 - 1882 is in the档 of the Army med mss & a list could easily be obtained.

The honorarium is just about what I get now at McGill but of course as you say the first six terms covered it more adequately  
My next term  
My earliest writing 'cerebral' a few  
lines back to you I have

If the election takes place any time before Aug 7 the date  
you can cable me at 25 Russell Sq  
London S.W. 1 send you yes or no  
mean the appointment or not to the chair  
let me know if I can do anything

sub edid.  
Thick layer of men. with blood  
blen

*Aryblesia intermeningeal* gl.  
ad - no parietal layer of the  
arachnoid - an inflam pim  
a p. m. fibrosa

- 5 Hyper trophy of heart wall dilata

Method for col. - colouring.  
(Forts. d Med; 1884. 6)

Auric. ocl & gent-violet-solution  
the sections to be examined, first in  
alcohol. absolut. & then dried in the  
col. solution - in which they remain  
1-3 minutes, only tubercle bacilli  
must 12-24 hours remain. Then  
in Iod-Kali solution (Iod. 1.0. Iod.  
Bali 2.0. Warmer 30°f either before  
or after washing in alcohol). They  
remain 1-3 minutes in the Iod. sol.  
in which a deposit is produced  
& the sections have now a purple-red  
color. Then in abs. alcohol. Until the  
sections almost colorless, change  
1 or 2 times. They do carry out whereby  
they are rendered still more colorless  
Man can also the sections in Haem -  
brown, or Reseum for double staining  
& then again in alcohol. The bac. remain  
blue & the grn. brown  
In balsam it gly-gel. sect. remains  
unchanged mostly

R M. of al. endocard.

1. in air at + 9 cent. for

2 10 to. 60 "

3  $\frac{1}{2}$  - 1 hr in abs. alcohol

4 " 60 min. dilute acetic acid sol  
water

5. alcohol - a.

Good suspensions with it

Weight method. Not yet

0.75 gram Kewalaydin

10 gm. alcohol.

90 cc H<sub>2</sub>O. Zusammensetzung  
annal amperiorum

Leichtes in this for 1 hour at  
ord. Temp.  $45^{\circ}\text{C}$ . Then in fluid containing  
74.9% Borax Lösung

5% Blut.

Lösung

In this for  $\frac{1}{4}$  hour enough  
alcohol. Thymus, Salsam  
Harden in Muller's alcohol

# Pneumonia Kochii

I Good specimen - fresh & in red stain

II with Gent violet - 2-4 hours  
dilute by acid & alch. - bad.

2 Methyl violet - not over good  
4 hours in

(3) Euche. fluid - also fair

(4) Gent. v. + am. oil. 1 hour  
at 45° & then in al. 33% or  
Acetone - much better

26/

Fresh preparat: good care. R Hap.

III Gent.viole + am. oil. 1 hour at 40°  
b) with 3 od solution - tolerably good  
care not good.

(2) same way but 2-4 hours in steam bath  
not good

Weights Nerve method

Double staining

(1) alcohol carmine - The nerve fibers are sulphat.

(2) dilute carmine. Good.

(3) alum carmine. Best (Dr says)

For muscle - First wash with  
alcohol for an hour. Then wash with  
alcohol again. Then stain in  
Bor's borax.

Bacilli - authors

10. in 9 cut v.

30" in alcoh ab.

5" miltken 1:

10 in alcoh ab.

5 in old wine

"Micrococcus ludovicianus"

- (1) Goblet plaud. 10 min vivian  
and 8% alcoh & stain but not over  
80% alc. subst. stains in dith. carmine good
- (2) Gent. violet + carm. & iod. sol.  
They wash out very much.
- (3) Methyl violet + alcoh.  
80% alc.

The Ehrlich - ph
